Bronzes & Coppers

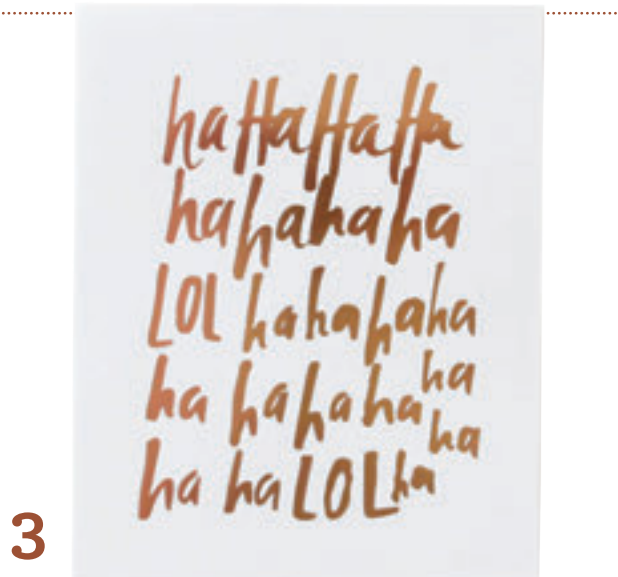

For those customers that like to be on the cutting edge of all things cool, what is the next generation of metallics? That's an easy one: bronzes and coppers! These warmer tones not only offset the season's colder temperatures, they are interesting in all finishes; it's no surprise to see them appearing in weathered textures, fancy foils and even glass. These shades are also ultra-flexible: Present them with golds or other metallics for a regal effect, or pair them with traditional fall colors for an earthy, approachable feel.
